Welcome

Thank you for downloading my Windows XP icon pack. All icons have been redrawn in 1024x1024 resolution. I worked on this off and on in my free time starting way back in January of 2019. I originally limited myself to only control panel icons, but soon expanded to any and every XP-style icon I could find. I had a lot of fun making this, and I hope you enjoy them.

What's Included

This pack includes over 500 icons. Most are redraws of actual icons, though there are several that are my own interpretation of an XP-style replacement to a 9x-style icon. The icons come from:

- Windows XP Home Edition

- Windows XP Professional

- Windows XP Media Center Edition 2005

- Windows XP Starter Edition

- Windows XP Tablet PC Edition

- Windows Server 2003 Enterprise Edition

- XP era software distributed for free by Microsoft

- Whistler (XP Beta) builds

- Early Longhorn (Vista beta) builds

- Service Pack 2 Beta

In each edition of XP, I searched through DLLs and other system files to try and catch any XP icon I could find. I was not able to source any usable Virtual Machines for embedded versions of XP, and there did not appear to be any unique icons in the Professional x64 edition.

What's Not Included

- Any 9x style icon, even if it appeared in XP

- Internet Explorer 7/8 icons, as they more accurately fit into the Vista/7 era icon style

- Office 2003 icons. Though similar, they follow a different style. I plan to release a comprehensive Office 2003 icon pack in the future.

Other Information

Check out my blog **guiarchive.blogspot.com** where I document various graphical user interfaces, and occasionally post some extras (like this icon pack.)
